LAB. LINQ TO SQL SỬ DỤNG DATA BINDING

- ❖ Sử dụng cơ sở dữ liệu: QLSINHVIEN_v4.sql
- * Xây dựng Form có dạng sau:

Bước 1: Tạo class ling to sql : QLSinhVienBD.dbml

> Bước 2: Khai báo các biến toàn cục

```
string path = "../../Hinh";
Table<SINHVIEN> Bang_SINHVIEN;
Table<LOP> Bang_LOP;
QLSinhVienBDDataContext db;
BindingManagerBase DSSV;
```

- **Bước 3:** Xử lý sự kiện cho form
 - Sự kiện Form load

```
private void Form1_Load(object sender, EventArgs e)
{
    db = new QLSinhVienBDDataContext();
    Bang_SINHVIEN = db.SINHVIENs;
    Bang_LOP = db.GetTable<LOP>();

    loadCBOLop();
    LoadDGVHocSinh();

    txtMaSV.DataBindings.Add("text", Bang_SINHVIEN, "MaSV", true);
    txtHoTen.DataBindings.Add("text", Bang_SINHVIEN, "HoTen", true);
    dateNgaySinh.DataBindings.Add("text", Bang_SINHVIEN, "NgaySinh", true);
    radNam.DataBindings.Add("checked", Bang_SINHVIEN, "GioiTinh", true);
    cboLop.DataBindings.Add("SelectedValue", Bang_SINHVIEN, "MaLop", true);
    txtQueQuan.DataBindings.Add("text", Bang_SINHVIEN, "DiaChi", true);
    pHinh.DataBindings.Add("ImageLocation", Bang_SINHVIEN, "Hinh", true);
```

```
DSSV = this.BindingContext[Bang_SINHVIEN];
enabledNutLenh(false);
```

Xây dựng các phương thức

```
private void loadCBOLop()
          {
              cboLop.DataSource = Bang_LOP;
              cboLop.DisplayMember = "TenLop";
              cboLop.ValueMember = "MaLop";
          }
          private void LoadDGVHocSinh()
              dgvDSSV.AutoGenerateColumns = false;
              dgvDSSV.DataSource = Bang_SINHVIEN;
          }
          private void enabledNutLenh(bool capNhat)
              btnThem.Enabled = !capNhat;
              btnXoa.Enabled = !capNhat;
              btnSua.Enabled = !capNhat;
              btnThoat.Enabled = !capNhat;
              btnLuu.Enabled = capNhat;
              btnHuy.Enabled = capNhat;

    Xử lý sự kiện cho các điều khiển

       private void btnThem_Click(object sender, EventArgs e)
       {
           DSSV.AddNew();
           enabledNutLenh(true);
       }
       private void btnLuu_Click(object sender, EventArgs e)
       {
            try
            {
                DSSV.EndCurrentEdit();
                db.SubmitChanges();
                enabledNutLenh(false);
            }
           catch (Exception ex)
                MessageBox.Show(ex.Message);
           }
       }
     private void btnHuy_Click(object sender, EventArgs e)
      {
         DSSV.CancelCurrentEdit();
         ChangeSet cs = db.GetChangeSet();
         db.Refresh(RefreshMode.OverwriteCurrentValues, cs.Updates);
         enabledNutLenh(false);
     }
     private void btnXoa_Click(object sender, EventArgs e)
      {
         DSSV.RemoveAt(DSSV.Position);
         db.SubmitChanges();
     }
     private void btnSua Click(object sender, EventArgs e)
         enabledNutLenh(true);
     }
```

```
private void btnChonHinh_Click(object sender, EventArgs e)
    openFileDialog1.Filter = "JPG Files|*.jpg|PNG Files|*.png|All Files|*.*";
    if (openFileDialog1.ShowDialog() == DialogResult.OK)
       string fileName = openFileDialog1.SafeFileName;
       string pathFile = path + "/" + fileName;
       if (!File.Exists(pathFile))
            File.Copy(openFileDialog1.FileName, pathFile);
       pHinh.ImageLocation = pathFile;
    }
private void btnTimKiem_Click(object sender, EventArgs e)
     DSSV.Position =Bang_SINHVIEN.ToList().FindIndex(sv =>sv.MaSV.Contains(txtTimKiem.Text));
private void txtTimKiem_MouseDown(object sender, MouseEventArgs e)
    txtTimKiem.Text = "";
private void btnThoat_Click(object sender, EventArgs e)
    this.Close();
}
```
